### Reading comprehension

**Directions (44-50):** Read the following passage carefully and answer the questions that follow.

Last week's New York Times article, 'People Now Spend More at Amazon than at Walmart', announced that the world's biggest brick-and-mortar retailer had been unseated by the e-commerce giant. The Wall Street Journal reported that 'Amazon Plans to Open Large Retail Locations akin to Department Stores'. The finer details of Amazon's planned entry to the regular retail sector, the very business that it disrupted, are not yet known. But one thing is for sure. How Amazon combines its digital and brick-and-mortar retailing strategies will define the future of shopping.

It is unlikely that Amazon will sell the same products in the two shopping environments. There could be a demarcation strategy as to what category of products will be sold through digital channels and what category mostly through the company's physical stores. There are several products that are bought by consumers routinely without much thinking. There is not much joy in shopping for them. It won't be a surprise if most of this sort of shopping moves fully into the digital space, a format that allows quick shopping.

There are categories where the shopper would like to try out products in person before deciding to purchase them. This is particularly beneficial in the apparel category, which can often be a guessing game for customers shopping online because of size and fit concerns. These are also categories where personal advice from an expert on what suits the customer best can add a lot of value. Such products are best shopped for in a brick-and-mortar store.

Big data analytics and artificial intelligence are already the backbone of both digital and physical-format shopping. In the future, the role of technology will only get more prominent, more so in the case of online shopping.
